This study presents a meta-analysis on fake news, misinformation, rumor, and disinformation through social media, which is known in this paper as "Fake News" (FN). The articles used for this review were retrieved from quality journals and conferences – journals included were those listed as A* or A journals in the Australian Business Deans Council (ABDC) quality list, and conferences included HICSS and the following AIS conferences: AMCIS, ICIS, ECIS, and PACIS using the phrases "fake news", "misinformation", "rumor", and/or "disinformation". The researchers will inspect each paper thoroughly using the title, keywords, abstract, references, and general content to screen the journals that make original contributions to fake news literature from Information Systems (IS) perspective. This study will discuss the past, the present, and the future of fake news research as well as insights to the IS literature from various perspectives.
